Question #1 *Topic 1*

Whose interests are specifically represented by the senior supplier?

1. Those ensuring the project is value for money.
2. Those who will use the project's products.
3. Those who will be developing the project's products.
4. Those responsible for the project's technical integrity.

A. 1 and 2

B. 2 and 3

C. 3 and 4

D. 1 and 4

Suggested Answer: *B*

Official Answer: B

Community vote distribution

Hoss2026 Most Recent 4 months, 2 weeks ago

The correct answer is C. Answer B couldn't be the right answer because option 2 is for senior client.

upvoted 1 times

Tyn77 10 months, 4 weeks ago

C is the correct answer please! Would be great if this can be corrected.

upvoted 2 times

LineLar 1 year, 12 months ago

Must be C then according to Appendix B.

upvoted 1 times

Esmee93 2 years, 5 months ago

Appendix B page 274 The senior supplier represents the interests of those designing, developing, facilitating, procuring and implementing the project product. This role is accountable for the quality of the project product (and its components) delivered by the supplier(s) and is responsible for the technical integrity of the project. If necessary, more than one person may represent the suppliers. Depending on the particular customer/supplier environment, the customer may also wish to appoint an independent person or group to carry out assurance on the supplier's products (e.g. if the relationship between the customer and supplier is a commercial one).

the provided site is unreachable . -> https://publications.axelos.com/prince2agile2016/content.aspx?page=pra_206&showNav=true&expandNav=true

upvoted 1 times

Djtomip 2 years, 10 months ago

chat GBT: While the senior supplier may work closely with those who will be developing the project's products (option 3), their primary responsibility is to ensure the technical integrity of the project. Therefore, while option 3 may have some representation from the senior supplier, it is not their primary focus. So if you have to choose two options, options 2 and 4 would be a better choice.

upvoted 3 times

Question #2 *Topic 1*

Which is a key objective of running a workshop?

A. To make daily progress visible to the delivery team and key stakeholders

B. To encourage collaboration and create the defined outputs from the event

C. To communicate decisions to the wider stakeholder community

D. To make day-to-day decisions on behalf of the delivery team within a sprint

Suggested Answer: *B*

the project board should have a way to access the level of risk within the project

upvoted 1 times

husnus 1 year, 9 months ago

Chatgpt also says A

upvoted 1 times

Djtomip 2 years, 4 months ago

Option A, "The project board should attend regular project progress meetings," is the correct statement about the 'directing a project' process in PRINCE2. The 'directing a project' process is one of the seven PRINCE2 processes that is responsible for providing overall direction and management for the project. The project board is responsible for directing the project, making key decisions, and ensuring that the project is delivered according to the project plan and business case. One of the key responsibilities of the project board is to attend regular project progress meetings to monitor the project's progress, review the project plan, and make any necessary changes. This helps ensure that the project is on track and that any issues or risks are addressed in a timely manner.

upvoted 2 times

Question #6 *Topic 1*

Which TWO are the purposes of a highlight report?

1. To describe the MoSCoW priority of user stories.
2. To summarize the status of a work package.
3. To summarize the stage status.
4. To report any potential issues and risks

A. 1 and 2

B. 2 and 3

C. 3 and 4

D. 1 and 4

Suggested Answer: *C*

Question #11 *Topic 1*

What term is used to describe boards that display what work needs to be completed for people working on a project?

A. Work in progress limit

B. Information radiator

C. Highlight report

D. Glad! Sad! Mad!

Suggested Answer: *B*

Official Answer: B

Community vote distribution

B (100%)

husnus Most Recent 1 year, 9 months ago

B. Information radiator Explanation: An information radiator is a visual display that provides information to project teams and stakeholders in a readily accessible format. It typically includes items such as task boards or Kanban boards, which show the status of tasks, what work needs to be completed, and what work is in progress. The term "information radiator" emphasizes the idea that information is radiated or broadcasted to everyone in the vicinity, making it easy for team members to stay informed about the project's status. A. Work in progress limit: This term refers to a constraint in Kanban systems that limits the number of tasks that can be in progress at any one time. C. Highlight report: This is a report used in PRINCE2 to summarize the status of the project for senior management, but it is not a board displaying work to be completed. D. Glad! Sad! Mad!: This is a retrospective technique used in Agile to gather feedback from team members about what made them glad, sad, or mad during a sprint, and it does not refer to a board displaying work.

upvoted 1 times

Old_Jedi 2 years, 1 month ago

The correct answer is "B", Information radiator: This term, originating from Lean practices, refers to a visual display that keeps everyone informed about the project's status in real-time. It's often a physical board or digital system used by agile teams to show work in progress, completed tasks, upcoming work, and any roadblocks.

upvoted 1 times

KayBatah 2 years, 3 months ago

B is correct

upvoted 1 times

Gepro 2 years, 7 months ago

Correct Answer is B Highlight report is wrong because it is ... ■ ... a report that the project manager creates and sends to the project board with the current status of the stage plan ■ ... incorporates the checkpoint reports from all team managers into a single report ■ ... a time-based control used in the project

upvoted 1 times

ptanmoyp 3 years ago

Answer is B, highlight report is used to provide the project board (and possibly other stakeholders) with a summary of the management stage status at intervals defined by them. The project board uses the report to monitor management stage and project progress. The project manager also uses it to advise the project board of any potential problems or areas where the project board could help.

upvoted 2 times

halvor 3 years, 7 months ago

Question #13 *Topic 1*

What should the business case state about the minimum viable product (MVP)?

A. When the MVP will be defined

B. That the MVP must go into operational use

C. What the MVP is

D. That the MVP is the same as project viability

Suggested Answer: *C*
Official Answer: C

Community vote distribution
C (100%)

AJ2021 Highly Voted 4 years, 1 month ago
Correct answer is C. The business case should clearly state what the minimum viable product (MVP) is and may give an indication of when this will be delivered and whether it will be put into operational use. The appropriate tolerances would be created around this so that if the project is forecast to deliver the MVP late (or even not at all) then an exception condition occurs. More information on MVP can be found in section 20.4.2
upvoted 9 times

husnus Most Recent 1 year, 9 months ago
C. What the MVP is Explanation: The business case should clearly define what the Minimum Viable Product (MVP) is. This involves specifying the core features and functionalities that must be included in the MVP to ensure that it delivers sufficient value to users and stakeholders, and to validate the project concept. This clarity helps stakeholders understand the minimum scope of the project and sets expectations for what the initial product will deliver. A. When the MVP will be defined: This might be included in a project plan or schedule, but the business case should focus on the definition and purpose of the MVP rather than its timing. B. That the MVP must go into operational use: While operational use might be a goal, the business case should first clarify what the MVP includes. D. That the MVP is the same as project viability: This is not accurate. The MVP is a part of the project that helps determine its viability, but it is not synonymous with overall project viability.
upvoted 1 times

SD1978 2 years, 3 months ago
Correct answer is C
upvoted 1 times

szt9 2 years, 4 months ago
Correct Answer is B: Definition: Minimum viable product It is important to note that an MVP is about learning; it may not go into operational use and may be in the form of a simple experiment or prototype.
upvoted 1 times

Djtomip 2 years, 4 months ago
C. What the MVP is. The business case should state what the minimum viable product (MVP) is. The MVP is the smallest set of features that will deliver value to the customer. It is the product that contains just enough features to satisfy early customers and provide feedback for future product development. The MVP is a key concept in agile development and is used to help teams focus on delivering value early in the project. The business case should also state when the MVP will be delivered and what benefits it will bring to the organization. However, it is not necessary for the business case to state that the MVP must go into operational use, as this will depend on the specific project and its objectives. Finally, the MVP is not necessarily the same as project viability, although it is an important factor in determining whether the project is viable or not. Why I have to pay to correct your answer!!!
upvoted 1 times

Hershik 2 years, 11 months ago
The correct answer is C. The business case should state what the Minimum Viable Product (MVP) is. The Minimum Viable Product (MVP) is a key concept in Agile project management. It refers to the smallest possible product or feature set that can be developed to satisfy the needs of the customer. The MVP is developed iteratively, with additional features and functionality added over time based on customer feedback. The business case should clearly state what the MVP is and why it is important. It should also explain how the MVP fits into the overall project strategy and how it will be developed and tested. The business case should also address any potential risks or challenges associated with developing the MVP.

B (67%) C (33%)

Abu_ahmad_ Most Recent 1 year, 7 months ago
CHAPTER 6.4.4 of the Prince2 Agile official book
upvoted 2 times

husnus 1 year, 9 months ago
Keep teams stable Don't add people to teams In traditional project management, when a project lags behind its schedule, the knee-jerk reaction is often to bolster the team with additional staff. But when doing this, the short-term effect is often to extend the schedule as new team members get up to speed with the project. This is why, in PRINCE2 Agile, cost tolerance (which often translates to human resources) is set at zero.
upvoted 2 times

Djtomip 2 years, 4 months ago
C. It prevents compromising the overall quality level of the product. The statement that is correct about the 'keep teams stable' target is that it prevents compromising the overall quality level of the product. The 'keep teams stable' target is a key principle of agile development, which emphasizes the importance of stable, cross-functional teams that can work together effectively over the long term. By keeping teams stable, the organization can build trust, foster collaboration, and improve communication among team members. This, in turn, can help to prevent compromising the overall quality level of the product. The tolerance for cost is set to zero as part of the 'value-driven' target, which emphasizes the need to deliver maximum value with minimum waste. This target is not directly related to the 'keep teams stable' target.

darthhansie 2 years, 11 months ago
The 'keep teams stable' target is primarily intended to prevent compromising the overall quality level of the product. This target is important because it helps to maintain the stability of the Agile team throughout the project, which in turn ensures that the team can work effectively and efficiently to produce high-quality outcomes.
upvoted 1 times

Question #16 *Topic 1*

What needs to happen when new detailed requirements are added to a timebox?

A. Requirements of a similar level of effort should be removed

B. More people should be added to the delivery team

C. The delivery milestones should be reviewed and re-planned

D. Formal change control should be applied

Suggested Answer: *A*

Official Answer: A

Community vote distribution

SD1978 Most Recent 1 year, 9 months ago

Correct answer should be D

upvoted 1 times

Djtomip 1 year, 10 months ago

If you can only choose one option, then the more appropriate choice would typically be: C. The delivery milestones should be reviewed and re-planned This option directly addresses the need to adjust the project plan and schedule to accommodate the new detailed requirements within the timebox. It is a standard practice in project management to review and re-plan when changes occur to ensure that the project remains on track. Option A (removing similar-level effort requirements) is a potential strategy within this re-planning process, but it doesn't encompass the entire process of assessing and adjusting the project plan, which is covered by option C.

upvoted 2 times

Gepro 2 years, 1 month ago

A as per negative selection: B) The well-known "keep teams stable" doesn't allow me to choose B C) Time is fixed. D) Formal change control is not applied for detailed requirements as per PRINCE2 Agile

upvoted 4 times

darthhansie 2 years, 5 months ago

If the new requirements cannot be accommodated within the existing timebox without compromising the delivery of other requirements, then it may be necessary to remove requirements of a similar level of effort in order to make room for the new requirements. This is often referred to as the "feature trade-off" approach.

PrincessOfHess Most Recent 1 year, 7 months ago
Chapter 6.4.5
upvoted 2 times

husnus 1 year, 9 months ago
B. It can result in the early delivery of a minimum viable product Explanation: The target of 'accept that the customer doesn't need everything' in Agile methodologies focuses on delivering the most valuable and essential features first. By prioritizing the most critical requirements and acknowledging that not all initially identified features are necessary for the product's success, teams can deliver a minimum viable product (MVP) earlier. This approach allows the customer to start using the product sooner and provides valuable feedback for future iterations. A. It gives confidence on the progress of the project: While it can contribute to overall project confidence, this statement does not directly capture the essence of the target. C. It allows misunderstandings to be dealt with appropriately: This is more about communication and clarification rather than prioritizing and delivering essential features. D. It is achieved by managing the culture of the team carefully: While managing team culture is important, it is not the primary focus of this target.

accepting that the customer doesn't need everything, the team can focus on delivering the minimum viable product (MVP) as early as possible. This helps to ensure that the team is delivering value to the customer and can receive feedback that can be used to improve the product.

upvoted 1 times

czmshote 2 years, 5 months ago

Agile is built upon the concept of “flexing” or “prioritizing” what is delivered to create value at the earliest point. This represents a significant change in how people think and act when working on a project. The project board needs to understand this to provide effective governance to the project

upvoted 1 times

BrianMwasaru 3 years, 6 months ago

B has a bold sense in it.. If not everything is important to the user then what us the essence of delaying the project with useless requirements whose values isn't important to the overall product

Rahu Highly Voted 3 years, 7 months ago

D is the Answer 6.4.1 Being on time and hitting deadlines Delivering early realization of benefits, and these can be planned around Helping with planning (e.g. dependencies within a project or between projects, capacity and resources at the portfolio and programme level) Giving confidence (e.g. with progress) There may be no choice (e.g. external market forces or regulatory considerations) Reducing the likelihood of cost overruns (assuming that resources are fixed) **Improving reputation (e.g. with the customer)**

upvoted 11 times

pearl25 Most Recent 1 year, 5 months ago

Some of these advantages can include: •delivering early realization of benefits, and these can be planned around •helping with planning (e.g. dependencies within a project or between projects, capacity and resources at the portfolio and programme level) •giving confidence (e.g. with progress) •there may be no choice (e.g. external market forces or regulatory considerations) •reducing the likelihood of cost overruns (assuming that resources are fixed) •improving reputation (e.g. with the customer).

upvoted 1 times

Djtomip 1 year, 11 months ago

A. It reduces testing in order to meet deadlines. The statement about the target 'be on time and hit deadlines' for flexible delivery is that it reduces testing in order to meet deadlines. This target is a key principle of agile development, which emphasizes the importance of delivering working software on time and responding to changing requirements. In order to meet deadlines, some teams may reduce the amount of testing that is performed on the software. While this can help to speed up the delivery process, it can also increase the risk of defects and other issues that may impact the quality of the software. Setting the project baseline at the correct level and enabling team dynamics to remain the same are not directly related to the target 'be on time and hit deadlines'. These targets are related to other aspects of agile development, such as managing project scope and fostering teamwork.

upvoted 1 times

Gepro 2 years, 1 month ago

A is really wrong here. EXAMTOPICS team please correct it. According to famous DION trainin >>> Be on Time and Hit Deadlines: ■ Early realization of benefits ■ Helps with planning ■ Gives confidence ■ There may be no choice ■ Reduces the likelihood of cost overruns ■ Improves reputation

upvoted 1 times

BrianMwasaru 3 years ago

Definitely D... You can't trade in testing for meeting deadline.. That's ridiculous.. You will end up delivering a product full of bugs and thus rendered unfit for use and lots of peoples' reputation is at stake

upvoted 1 times

mcb22 3 years, 6 months ago

I'd go for D also. Definitely not A as it is not about reducing testing

upvoted 1 times

Question #22 *Topic 1*

Which statement about the 'protect the level of quality' target is CORRECT?

A. It is achieved by allowing enough time for testing

B. It is achieved by using the same team members

C. It gives confidence on the progress of the project

D. It delivers the early realization of benefits

Suggested Answer: *D*

The answer is A.

upvoted 7 times

KayBatah Most Recent 1 year, 9 months ago

this is a very fluid question. A and B are both valid answers . but reference to the below, A could be a conclusion . 6.4.2 Protecting the level of quality the book says " herefore, this should be avoided. PRINCE2 Agile protects the level of quality and ensures that deadlines are met by reducing the amount delivered by the project but not reducing activities that ensure that the quality level is met."

upvoted 1 times

Djtomip 1 year, 10 months ago

Yes, I'm sure. Option A, which states that "protecting the level of quality" is achieved by allowing enough time for testing, is a correct statement in the context of project management and quality assurance. Adequate time for testing is a fundamental aspect of ensuring that a project's deliverables meet the desired quality standards.

upvoted 1 times

Gepro 2 years, 1 month ago

I opt for A. D with answer "It delivers the early realization of benefits" relates to agile target "Be on Time and Hit Deadlines"

upvoted 1 times

Eleftheriia 3 years, 5 months ago

Answer could be a because in the Agile book it is stated that: "It is understood by all that flexing what is being delivered will protect deadlines and quality, and specifically that this will prevent quality-checking and testing from being squeezed."

Correct answer is

upvoted 1 times

Djtomip 1 year, 10 months ago

I apologize for any confusion earlier. Yes, based on the information provided, the correct answer is indeed: D. To fail fast, if you are going to fail. This concept is not typically associated with PRINCE2, as PRINCE2 follows a more structured and risk-averse approach to project management, whereas Lean Startup encourages failing fast as a strategy for learning and adaptation. Thank you for your patience in seeking clarification, and I appreciate your understanding.

upvoted 1 times

Djtomip 1 year, 11 months ago

None of the core concepts of Lean Startup are fundamentally incompatible with PRINCE2, but option C may be the least closely related to PRINCE2. The other three concepts - using empiricism based on knowledge that comes from experience, building, measuring, and learning from experiences, and failing fast if you are going to fail - are all compatible with the core principles and themes of PRINCE2. Creating a minimum viable product to manage uncertainty is a core concept of Lean Startup, which emphasizes the importance of testing and validating assumptions through experimentation and feedback. While this concept is not incompatible with PRINCE2, it is not explicitly included in PRINCE2, which focuses more on planning and controlling the project through defined stages and processes.

upvoted 1 times

Djtomip 1 year, 10 months ago

Tricky , if for prince 2 it is fixed

upvoted 1 times

Djtomip 1 year, 11 months ago

B. Cost tolerance can be fixed or flexed. In an Agile context, the setting of the cost tolerance for a project can be fixed or flexed, depending on the specific circumstances of the project. Agile methodologies, such as Scrum, emphasize the importance of flexibility and responding to change, and this is reflected in the concept of cost tolerance. Cost tolerance refers to the amount of deviation from the planned budget that can be tolerated without requiring a change to the project baseline.

upvoted 2 times

Gepro 2 years, 1 month ago

This must be corrected. Cost and time tolerance is fixed. This are the very basics of PRINCE2 Agile. If you have this wrong, then really open your book and start learning instead of taking the exam.

Question #30 *Topic 1*

In Scrum, what answers the question 'what can be done this sprint?'

A. Daily scrum

B. Sprint review

C. Sprint planning

D. Increment

Suggested Answer: *C*

Official Answer: C

Community vote distribution

C (100%)

KayBatah Most Recent 1 year, 9 months ago

The Scrum Guide™ H The definitive guide to Scrum - page 305 Sprint Planning Sprint Planning initiates the Sprint by laying out the work to be performed for the Sprint. This resulting plan is created by the collaborative work of the entire Scrum Team. Daily Scrum The purpose of the Daily Scrum is to inspect progress toward the Sprint Goal and adapt the Sprint Backlog as necessary, adjusting the upcoming planned work.

upvoted 1 times

darthhansie 2 years, 5 months ago

The answer is C. Sprint planning is the Scrum ceremony where the Development Team collaborates with the Product Owner to determine which Product Backlog items will be completed during the upcoming Sprint. Sprint planning answers the question "What can be done this Sprint?" and creates a plan for the Sprint, including a Sprint Goal and a Sprint Backlog.

upvoted 1 times

CFT 2 years, 6 months ago

This is factually wrong. Sprint planning is creating a backlog of work items (user stories) to be done for that sprint. Daily standup is only a check-in to see if anyone has any blockers or are stuck with a task.

upvoted 1 times

alice07 2 years, 7 months ago

I wonder if the answer is C - Sprint Planning as far as I have googled the question.

Question #31 *Topic 1*

Which is a benefit of the Lean Startup approach to releasing a product?

A. It provide a technique to reduce the testing of a product before release

B. It enables the release plans to be synchronized with the PRINCE2 plans

C. It reduces the number of people needed to manage a release of a product

D. It provides quick feedback that can be responded to at the earliest opportunity

Suggested Answer: *B*

Reference: https://publications.axelos.com/prince2agile2016/content.aspx?page=pra_170&showNav=true&expandNav=true

Community vote distribution

D (100%)

Djtomip Most Recent 1 year, 11 months ago

D. It provides quick feedback that can be responded to at the earliest opportunity. One of the main benefits of the Lean Startup approach to releasing a product is that it provides quick feedback that can be responded to at the earliest opportunity. The Lean Startup approach emphasizes the importance of releasing a Minimum Viable Product (MVP) as early as possible in order to test assumptions and get feedback from customers.

upvoted 2 times

darthhansie 2 years, 5 months ago

The benefit of the Lean Startup approach to releasing a product is that it provides quick feedback that can be responded to at the earliest opportunity. The Lean Startup approach emphasizes the importance of releasing a minimum viable product (MVP) as early as possible and then using customer feedback to improve the product. This approach enables the product team to quickly iterate and pivot based on customer feedback, resulting in a product that better meets the needs of the customers.

upvoted 2 times

AJ2021 3 years, 7 months ago

D is correct. Some of the fundamentals of the Lean Startup approach involve releasing a product in such a way that it maximizes the viability of the product and enables it to fail fast if it is going to fail. A well-crafted release plan can prove significantly beneficial to an organization. It can create feedback that can be responded to at the earliest opportunity.

Question #35 *Topic 1*

How is the 'tailor to suit the project' principle applied in an agile context?

A. By flexing what is produced to stay in control and deliver value

B. By emphasizing tolerances on what is being delivered

C. By using the Agilometer to assess the project environment

D. By fitting releases into planned management stages

Suggested Answer: *C*
Official Answer: C

Community vote distribution
C (100%)

KayBatah Most Recent 1 year, 9 months ago
7.3 Guidance on applying the PRINCE2 principles Table 7.1 Overview of the guidance when applying PRINCE2 principles in an agile context Tailor to suit the project environment PRINCE2 Agile incorporates an agile assessment tool (the Agilometer: see Chapter 24), which enables further specific tailoring by assessing the risks associated with the agile way of working with respect to the project environment (e.g. How engaged is the customer? How easy is communication?).
upvoted 2 times

Djtomip 1 year, 10 months ago
In that case, for the application of the "tailor to suit the project" principle in the context of PRINCE2 Agile, the more precise choice is: C. By using the Agilometer to assess the project environment. This option directly references a tool within PRINCE2 Agile that helps evaluate the project's need for agility and guides the tailoring of the approach accordingly.
upvoted 2 times

Djtomip 1 year, 11 months ago
A. By flexing what is produced to stay in control and deliver value. In an Agile context, the "tailor to suit the project" principle is applied by flexing what is produced to stay in control and deliver value. This means that the Agile approach is tailored to the specific needs of the project, rather than trying to force a one-size-fits-all approach. The Agile Manifesto emphasizes the importance of responding to change and delivering working software frequently, which requires a flexible and adaptable approach. This means that the Agile team must be able to adjust their approach to suit the specific needs of the project and respond to changing requirements and priorities. By tailoring the Agile approach to the project, the team can stay in control of the project and ensure that they are delivering value to the customer. This may involve adjusting the Agile ceremonies, such as Sprint Planning or Daily Scrum, to better suit the needs of the project, or incorporating additional practices or tools to address specific project requirements.

27.2.3 Not releasing into operational use "Unfortunately there is a significant limitation with respect to agile's desire for regular, frequent (even continual) delivery when some form of staging area is involved. Typical reasons for inclusion of a staging area are regulatory compliance checking, integration testing or any other form of validation and verification process. The problem is that when an error is picked up and a change needs to be made, further work may have already taken place on the current state of the product, which would have been baselined at the point of delivery into the staging area."

Community vote distribution

B (100%)

KayBatah Most Recent 1 year, 9 months ago

B 3.6 Important points about PRINCE2 Agile and this manual In order to correctly understand PRINCE2 Agile and this manual, the reader must be aware of the following eight guidance points which are intended to provide clarity where there is potential for ambiguity, and accuracy where there may be misconceptions. These points are summarized in Table 3.4 for quick reference. 1.All references to PRINCE2 refer to the edition created in 2017 (Managing Successful Projects with PRINCE2). This version is already enabled to work with agile; it just needs to be tailored to suit any given project. Configuring PRINCE2 in the most effective way for agile is a matter of where to put emphasis and where to add further levels of detailed guidance. Nothing needs to be removed or significantly changed, as this is achieved through blending agile into PRINCE2 and tuning PRINCE2 appropriately

upvoted 2 times

Djtomip 1 year, 11 months ago

B. Where to put the emphasis and where to add guidance should be decided when configuring PRINCE2 effectively. When configuring PRINCE2, it is important to tailor the methodology to suit the specific needs of the project and organization. This involves deciding where to put the emphasis and where to add guidance, based on the project's objectives, scope, and requirements.

clear as the sun 5.3 The themes (page 31) The purpose of the quality theme is to define and implement the means by which the project will verify products that are fit for purpose. The initial idea will only be understood as a broad outline. This theme explains how the outline is developed so that all participants understand the quality attributes of the products to be delivered and then how project management will ensure that these requirements are subsequently delivered.

upvoted 2 times

Djtomip 1 year, 11 months ago

To answer the question, you should choose the option that best represents the primary purpose of the quality theme in PRINCE2. Based on that, the correct answer is D - To assess any potential improvements to a product. While A and C are also purposes of the quality theme in PRINCE2, they are not as central to the theme's primary objective as assessing potential improvements to a product.

Question #47 *Topic 1*

What is an epic?

A. A low-level requirement

B. A fine-grained user story

C. A detailed feature

D. A high-level requirement

Suggested Answer: *D*

4.1 Pre-project and the initiation stage (page 30) Definition: Epic A high-level definition of a requirement that has not been sufficiently refined or understood yet. Eventually, an epic will be refined and broken down into several user stories or requirements

upvoted 1 times

AJ2021 3 years, 7 months ago

Was thinking maybe B: In effect this is a high-level or 'super-user' story that will over time be broken down into user stories at a level of granularity that the delivery teams can work on.

Question #48 *Topic 1*

Which is an advantage of using the PRINCE2 Agile behavior 'collaboration'?

A. It ensures that there are no surprises

B. It allows people to provide cover for one another

C. It uses experimentation to expand requirements

D. It uses learning to help improve products

Suggested Answer: *D*

Official Answer: D

Community vote distribution

B (100%)

Bennoli13 Most Recent 1 year, 6 months ago

The PRINCE2 Agile behavior "Collaboration" emphasizes teamwork, shared responsibility, and collective ownership of tasks. A key advantage of collaboration is that team members can support and cover for each other, ensuring continuity even when individuals are unavailable.

upvoted 1 times

Djtomip 1 year, 11 months ago

If the question is asking for only one answer, then I would choose option D ("It uses learning to help improve products") as the primary advantage of using the collaboration behavior in PRINCE2 Agile. While experimentation and expansion of requirements are also important benefits of collaboration, the focus on continuous learning and improvement is a central tenet of the PRINCE2 Agile methodology and can lead to higher quality project outcomes.

Question #49 *Topic 1*

Which is typically used in agile when estimating detailed requirements during sprint planning?

A. Rationalism

B. Trading

C. Visioning

D. T-shirt sizing

Suggested Answer: *D*

Official Answer: D

Community vote distribution

D (100%)

Djtomip Most Recent 1 year, 10 months ago

D. T-shirt sizing is typically used in agile when estimating detailed requirements during sprint planning. T-shirt sizing is an estimation technique used in agile development that involves assigning t-shirt sizes (e.g. XS, S, M, L, XL) to user stories or other requirements based on their relative complexity or effort. This approach is often used during sprint planning to help teams estimate the level of effort required for each requirement and ensure that they can realistically commit to completing the work within the sprint timeframe. Option A (Rationalism), option B (Trading), and option C (Visioning) are not commonly used estimation techniques in agile development.

upvoted 3 times

CFT 2 years, 6 months ago

D is correct - T-Shirt sizing is incredibly common in agile sprint planning, whereas rationalism is not. Sprint planning estimation is done by the opposite of rationalism - empiricism, resulting in a T-shirt size to understand the complexity of the task.

B (100%)

Gepro Most Recent 2 years, 1 month ago

B is correct according to famous DION training: Agile techniques address the familiar project risks by… ● Avoiding too much detail at the start ● Daily stand-ups ● Frequent delivery of product ● Frequent demos ● Customer interaction ● Self-managed teams

upvoted 2 times

darthhansie 2 years, 5 months ago

Agile addresses the risk associated with the project not being fully understood at the beginning by avoiding too much detail at the start, which is option B. Agile is an iterative and incremental approach to project management, which means that it values flexibility and the ability to adapt to changing circumstances. Agile acknowledges that it is difficult, if not impossible, to fully understand a complex project at the beginning, and that new information and requirements may emerge as the project progresses. By avoiding too much detail at the start, agile allows for more flexibility in responding to changes and new information that may emerge during the project. Agile methodologies typically involve breaking down the project into smaller, more manageable pieces, and delivering incremental value to the customer at each stage. This allows for frequent opportunities to re-evaluate and adjust the project's goals and requirements based on new information and changing circumstances.

Question #55 *Topic 1*

Which TWO statements about the typical tailoring of a checkpoint report in an agile environment are CORRECT?

1. It should be replaced by the project manager attending a daily stand-up.
2. It should be displayed in the form of an information radiator in a team room.
3. It should be produced when the amount to be delivered will result in tolerance being exceeded.
4. It should be produced in a product backlog in the form of prioritized user stories.

A. 1 and 2

B. 2 and 3

C. 3 and 4

D. 1 and 4

Suggested Answer: *A*

Official Answer: A

Community vote distribution

thedevguy Most Recent 2 years, 1 month ago

Checkpoint reports are usually informal and they may also appear on information radiators. They may be replaced by standup meetings if the delivery team is happy for the project manager to attend.

upvoted 1 times

KayBatah 2 years, 3 months ago

im sure about point 2... not 3 Table 23.3 Tailoring report products page 197 An important product that would typically be in the form of an information radiator and/or a burn chart (see Figure 15.1). Could be replaced by a daily stand-up or Scrum meeting with the agreement of the delivery team but would need to avoid being seen as a 'reporting to' mechanism. If the information is transparent then this can be extracted (or 'pulled') by the project manager when required

Question #63 *Topic 1*

When should PRINCE2 Agile be used?

A. When a team is created to deliver a specific product

B. When delivering an ongoing service to a customer

C. When an established team performs product maintenance

D. When simple requests to update a product are implemented

Suggested Answer: *A*

Official Answer: A

Community vote distribution

A (100%)

Old_Jedi Most Recent 2 years, 1 month ago

The correct answer should be A

upvoted 1 times

Djtomip 2 years, 4 months ago

why u guys dont give feedback to our commments!!??

upvoted 2 times

darthhansie 2 years, 11 months ago

Should be A PRINCE2 Agile is best suited for projects that require a flexible, iterative approach to delivery, where requirements may change frequently, and where there is a need for close collaboration between the project team and the customer or end-user. Therefore, PRINCE2 Agile is most appropriate when delivering new products, services, or systems that are complex, uncertain, or where there is a significant degree of innovation involved. It can also be used in situations where there is a need for ongoing maintenance or enhancement of an existing product or service, as long as there is a requirement for agility and flexibility in the delivery process.

upvoted 2 times

CFT 3 years ago

Why is this not A? Established teams are business as usual, which should not be governed by project management.

Question #64 *Topic 1*

Which statement about the 'protect the level of quality' target is CORRECT?

A. It is achieved by ensuring that all features are delivered

B. It is unlikely to be achieved if incomplete user documentation is provided

C. It allows change at the detailed level to be handled dynamically

D. It avoids the use of extra people to improve progress during a timebox

Suggested Answer: *A*

Official Answer: A

Community vote distribution

B (100%)

Vijay29 Most Recent 1 year, 9 months ago

C. It allows change at the detailed level to be handled dynamically The 'protect the level of quality' target in agile contexts allows change at the detailed level to be handled dynamically. It emphasizes maintaining the quality of the product while being flexible and responsive to changes in requirements or priorities. This enables the team to adapt and adjust without compromising the overall quality of the deliverables.

upvoted 2 times

Djtomip 1 year, 10 months ago

why it can be wrong again

upvoted 1 times

Djtomip 1 year, 10 months ago

Option B (It is unlikely to be achieved if incomplete user documentation is provided) is correct. If the project's user documentation is incomplete, it is unlikely that the project's products will meet the required level of quality. Complete user documentation is necessary to ensure that the project's products are fit for purpose and meet the needs of the project's stakeholders.
