Question #1 *Topic 1*

Who starts the Daily Scrum?

A. The person coming in last. This encourages people to be on time and helps to stay within the time-box.

B. Whoever the Development Team decides should start.

C. The person who has the token.

D. The Scrum Master. This ensures that the Development Team has the meeting and stays within the time-box.

E. The person who last broke the build.

Suggested Answer: *B*

Official Answer: B

Community vote distribution

Soycra Highly Voted 2 years, 5 months ago

B is correct @TaylaPV scrum master doesn't have to participate. Quote Scrum Guide Reorderd 2020 "The Daily Scrum is a 15-minute event for the Developers of the Scrum Team. To reduce complexity, [the Daily Scrum] is held at the same time and place every working day of the Sprint. If the Product Owner or Scrum Master are actively working on items in the Sprint Backlog, they participate as Developers. The Developers can select whatever structure and techniques they want, as long as their Daily Scrum focuses on progress toward the Sprint Goal and produces an actionable plan for the next day of work. This creates focus and improves selfmanagement. "

upvoted 5 times

A100D Most Recent 10 months, 1 week ago

Le daly est pour les developpeur et le Scrum Master n'est pas obliger de participer

upvoted 1 times

CuchNguyen 1 year, 8 months ago

The Daily Scrum is run by the developers of the Scrum team for the developers of the Scrum team. However, according to the Scrum Guide, “If the Product Owner or Scrum Master are actively working on items in the Sprint Backlog, they participate as Developers.” Developers can hold the daily standup meeting by themselves, but a Scrum Master or other Agile Coach may facilitate it, especially when the team is new to Scrum. The Scrum Master may also coach the developers on how to make the Daily Scrum productive and how to keep it within the 15-minute time box.

D (100%)

Gopal87p Most Recent 11 months, 1 week ago

Ensure every Increment meets them.

upvoted 1 times

nervesjangles4 1 year, 4 months ago

The best answer is: D. Ensure every Increment meets them. Explanation: Non-functional requirements (NFRs), such as performance, security, scalability, and usability, are critical aspects of a product. According to Scrum principles, every Increment should be in a usable state, which means it must meet both functional and non-functional requirements. These should be considered from the beginning and integrated into the Definition of Done to ensure every Increment meets the necessary standards.

upvoted 1 times

Njlchn 2 years, 2 months ago

There is no separate sprint for non functional requirements in scrum

upvoted 1 times

Question #4 *Topic 1*

When many Scrum Teams are working on the same product, should all of their Increments be integrated every Sprint?

A. No, each Scrum Team stands alone.

B. Yes, but only for Scrum Teams whose work has dependencies.

C. Yes, otherwise the Product Owners (and stakeholders) may not be able to accurately inspect what is done.

D. No, that is far too hard and must be done in a hardening Sprint.

Suggested Answer: *C*

Official Answer: C

Community vote distribution

nervesjangles4 Most Recent 1 year, 4 months ago

The best answer is: C. Yes, otherwise the Product Owners (and stakeholders) may not be able to accurately inspect what is done. Explanation: In Scrum, when multiple Scrum Teams work on the same product, their Increments must be integrated every Sprint to ensure that stakeholders and the Product Owner can inspect a usable and potentially releasable product. This supports empiricism, transparency, and continuous feedback.

upvoted 1 times

Bo8 2 years, 1 month ago

Yes, the correct answer is C: during sprint review the team is presenting the complete increment to the stakeholders (NOT the separate parts of it)

upvoted 1 times

HaraTadahisa 2 years, 1 month ago

C is correct answer.

upvoted 1 times

Question #5 *Topic 1*

The Development Team should have all the skills needed to: (Choose the best answer.)

A. Turn Product Backlog items into an Increment of potentially releasable product functionality.

B. Do all of the development work, except for specialized testing that requires additional tools and environments?

C. Complete the project within the date and cost as calculated by the Product Owner.

Suggested Answer: *A*

Official Answer: A

Community vote distribution

nervesjangles4 Most Recent 1 year, 4 months ago

Explanation: The Development Team in Scrum is cross-functional, meaning it should have all the skills necessary to transform Product Backlog Items (PBIs) into a Done Increment every Sprint. This includes development, testing, design, integration, and any other activities required to meet the Definition of Done.

upvoted 2 times

Sylvester84 1 year, 6 months ago

Development team should have all the skills to develop de items and meet the definition of done

Question #10 *Topic 1*

When the Developers determine that they will not be able to finish the complete forecast, who has to be present when reviewing and adjusting the Sprint work selected? (Choose the best answer.)

A. The Product Owner and all stakeholders.

B. The Scrum Master and the Developers.

C. The Scrum Master, project manager and the Developers.

D. The Product Owner and the Developers.

Suggested Answer: *D*

Official Answer: D

Community vote distribution

D (100%)

nervesjangles4 Most Recent 1 year, 4 months ago

• The Developers are responsible for managing the Sprint Backlog and adapting it as needed. • If they realize they won't complete all the planned work, they should collaborate with the Product Owner to adjust priorities while keeping the Sprint Goal intact. • The Product Owner ensures that any changes align with business priorities and stakeholder needs.

upvoted 1 times

DUSHIWORLD 1 year, 6 months ago

The Product Owner plays a key role in adjusting the scope of the Sprint. They work with the Developers to decide which Product Backlog items should be adjusted or removed based on the remaining capacity and priority. The Scrum Master may also facilitate this discussion, ensuring that the team stays aligned with Scrum principles and helps remove any obstacles, but the Product Owner is the person responsible for prioritizing the work. The goal is to ensure that the remaining work in the Sprint is aligned with the highest value and that the Sprint Goal can still be met, even if the full forecast cannot be completed.

Question #11 *Topic 1*

True or False: An Increment must be released to customers or users at the end of each Sprint.

A. True

B. False

Suggested Answer: *B*

Official Answer: B

Community vote distribution

LetsTalkAboutFufu Most Recent 1 year, 3 months ago

B is correct, same answer in PSM 1

upvoted 1 times

DUSHIWORLD 1 year, 6 months ago

An Increment does not have to be released to customers or users at the end of each Sprint. The key requirement in Scrum is that the Increment must be "done," meaning it meets the Definition of Done and is potentially releasable. However, whether or not it is actually released to customers or users is a decision for the Product Owner and stakeholders to make, based on their needs and priorities.

upvoted 1 times

Sylvester84 1 year, 6 months ago

B - it should be delivered when makes sense

upvoted 1 times

Jimmystuff 2 years, 1 month ago

"Multiple Increments may be created within a Sprint. The sum of the Increments is presented at the Sprint Review thus supporting empiricism. However, an Increment may be delivered to stakeholders prior to the end of the Sprint. The Sprint Review should never be considered a gate to releasing value. " Beware of absolutist remarks like "must".

upvoted 3 times

Bo8 2 years, 1 month ago

B is the answer

upvoted 1 times

horton 2 years, 4 months ago

"False. An Increment does not necessarily have to be released to customers or users at the end of each Sprint. The Scrum Guide states that at the end of a Sprint, the Development Team should have produced a potentially releasable Increment of the product. This means that the Increment should be in a state where it could be released to customers or users if the Product Owner decides to do so. However, the decision to release the Increment to customers or users is ultimately up to the Product Owner, who may choose to release it at any time, not necessarily at the end of each Sprint."

upvoted 2 times

Yogeenie 2 years, 5 months ago

“An Increment must be released to customers or users at the end of each Sprint.” This principle emphasizes the importance of delivering a usable product to stakeholders, even if it doesn’t yet include all desired features. By doing so, the Scrum Team can gather early feedback and make necessary adjustments, fostering transparency and continuous improvement within the Scrum framework.

horton 1 year, 10 months ago

The Development Team is accountable for creating a valuable and usable Increment each Sprint. The Development Team is responsible for delivering high-quality work that meets the Definition of Done and fulfills the requirements of the Product Backlog items selected for the Sprint. The Development Team collaborates with the Product Owner to understand the product requirements and with the Scrum Master to ensure that the Scrum framework is followed effectively. Ultimately, the Development Team is accountable for delivering a potentially releasable Increment that adds value to the product and can be potentially released to customers or users.

Question #35 *Topic 1*

Which two ways of creating Scrum Teams are consistent with Scrum's values? (Choose two.)

A. Managers personally re-assign current subordinates to new teams.

B. The Chief Product Owner determines the new team structures and assignments.

C. Managers collaborate to assign individuals to specific teams.

D. Existing teams propose how they would like to go about organizing into the new structure.

E. Bring all the people together and let them organize into Scrum Teams.

Suggested Answer: *D, E*
Official Answer: DE

Question #36 *Topic 1*

A Scrum Team has been working on a product for 9 Sprints. A new Product Owner who is new to Scrum joins the team and understands she is accountable for the Product Backlog. However, she is unsure about the purpose of the Product Backlog. She has read that the Product Backlog should be a list of all user features for the product. She goes to the Scrum Master asking where to put the other types of requirements that are going to be taken into account. Are all of the following types of requirements acceptable on a Product Backlog?
Stability requirements -
Performance requirements -
Product Functionality -
Documentation -
Fixes

A. Yes, they all belong on the Product Backlog. The Product Backlog is supposed to be the “single source of truth” for all the work for the product.

B. No. Product Backlog is a tool for the Product Owner. The Product Owner represents the users and stakeholders. Other types of requirements should be managed separately by the Developers. They are not the Product Owner's concern.

Suggested Answer: *A*
Official Answer: A

Question #37 *Topic 1*

Why would you expect a Product Owner to care that the Scrum Team adheres to its Definition of Done? (Choose two.)

A. The Product Owner should not concern themselves with meeting the Definition of Done, it is the Developer's responsibility.

B. To be able to punish the team when they do not meet their velocity goal for the Sprint.

C. To forecast the team's productivity over time.

D. To have complete transparency into what has been done at the end of each Sprint.

E. The Definition of Done can affect the product's total cost of ownership.

Question #38 *Topic 1*

What does it mean for a Scrum Team to be cross-functional? (Choose the best answer.)

A. The Scrum Team is a virtual team drawing from separate teams of business analysts, architects, developers, and testers.

B. The Scrum Team includes skilled individuals who together have all the skills necessary to create value each Sprint.

C. The Scrum Team includes not only developers but also business analysts, architects, and testers.

D. Developers on the Scrum Team work closely with business analysts, architects, developers, and testers who are not on the team.

Suggested Answer: *B*

B and C is correct

upvoted 2 times

Jimmystuff 2 years, 1 month ago

Not A ...the Scrum guide doesn't mention User Stories. D might be true however the Product Owner can be shared with other teams so he can't be "all the time" with a single scrum team.
